Dashboard & Reporting System

Bulk Data Import & Export

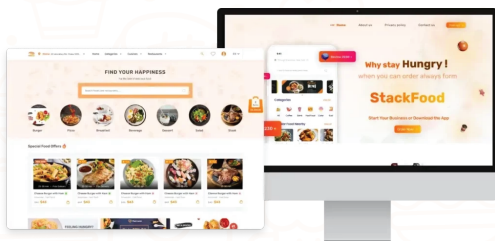

Third Party APIs Integration

COD & Digital Payments

Manage Entire System with

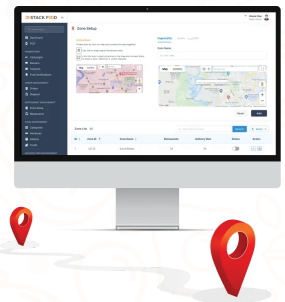

Separate Websites for Admin & Customers

With GB Mart, you'll get two different websites. One is for the Admin, where they can showcase their business and influence others to join as a restaurant or deliveryman. The other is for the customers, who can log in and order food by choosing their favorite restaurants.

Zone-wise Restaurant Setup

Choose different business areas and add restaurants according to the location. So restaurants can target local customers, and customers can find their favorite restaurants nearby to order food. That's how you can manage multiple business zones centrally.

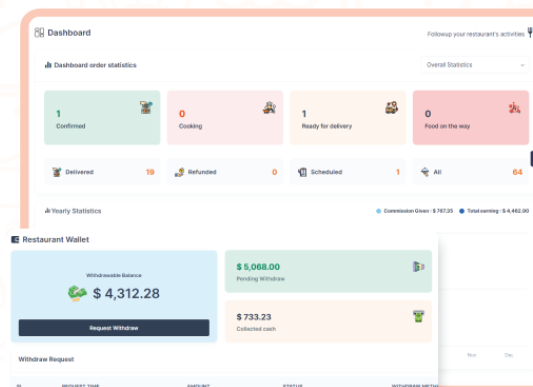

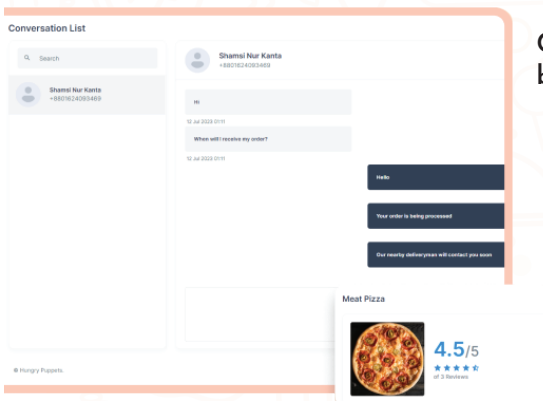

Customer Retention by Restaurant
